

C++ Assignment No. 5

1) Implement transaction in Bank Account program.

Transaction class should contain following data members.

```
accountNo : int,  
date : string,  
type : string(deposit/withdraw),  
amt : float
```

*Hint - Maintain transaction for each account for deposit and withdraw.

2) Implement linear queue using array

```
class queue  
{  
private:  
    int arr[SIZE];  
    int front;  
    int rear;  
public:  
    queue(void);  
    bool is_queue_full(void);  
    bool is_queue_empty(void);  
    void enqueue(int ele);  
    void dequeue(void);  
    int get_front(void)  
}
```
