1) Write a class to find volume of a Cylinder by using following members.
Class: Cylinder
- height : double
- radius : double
- volume : double
Note : (volume of Cylinder=3.14 * radius * radius * height)

Member functions :
+ Cylinder(void)
+ Cylinder(height : const double, radius : const double)
+ setHeight(height : const double) : void
+ setRadius(radius : const double) : void
+ calculateVolume(void) : void
+ getVolume(void) : double

2) Modify the Date class to add number of days and to return day of week.
```
class Date
{
private:
        int day;
        int month;
        int year;
public:
        void initDate();
        void acceptRecord();
        void printRecord();
        void addNumberOfDays( int count );
        string dayOfWeek();
};
```
